Introduction

RED BLUE FLAME FIRE SAFETY& SECURITY SYSTEM is certified company; established in United Arab Emirates in 2008. We undertake complete installation of Fire Alarm and Fire Fighting systems in accordance fire code &NFPA standards.

Our area of expertise is
Supply, Installation, testing and commissioning of fire alarm and fire fighting works.

- Annual Maintenance Contracts / AMC of existing facilities.
- Installation of fire protection system in any type of projects
- Design of fire protection system for any type of projects
- Refilling of fire extinguishers.
- Supply, installation & Trading of fire pumps
- Supply, installation & Trading of sprinkler heads
- Supply, installation & Trading of Fire extinguishers / FM200 system
- Supply, installation & Trading of conventional fire alarm system.
- Supply, installation & Trading of addressable fire alarm system.
- Supply, installation & Trading of wireless fire alarm equipment.
- Supply, installation & Trading of emergency lighting system.

Red Blue flame fire safety is a leading Fire Protection, Engineering, Supply and service Company offering a “one stop shop” for client’s system solutions and equipment needs. The Company's facilities are based throughout the UAE with head office in Dubai. A wide customer base is covered in all major market sectors. Red Blue flame operates mainly in UAE, with representation in key areas throughout the MENA region.

PORTFOLIO

Red Blue Flame has professionally trained and qualified team of engineers and technicians who would perform to the highest standard of quality to satisfy the client/ consultant requirements which would meet with their approval. Our sales team will make a strong follow up of the after sales services as well.

Red Blue Flame has full capacity to execute all the installation jobs for all type of fire alarm and firefighting systems. All the projects are executed with well experienced engineers and highly technical people. We have special Team to carry out all the jobs for maintenance.

Red Blue Flame commenced its operations in year 2014 for Fire Protection systems supply, Installation and services. Since then, our core competence has been to identify, assess, and advise on how to manage risk. Whether we inspect a plant, equipment, material or certify a company's management system, or advice on how to do proper welding or preventing corrosion or detecting flaws, our focus is to safely and responsibly improve business performance.

We aim to be the most competitive and the most productive service organization in the world. Our core competencies in inspection, verification, testing and certification are being continuously improved to be best-in-class. They are at the heart of what we are. Our chosen markets will be solely determined by our ability to be the most competitive and to consistently deliver unequalled service to our customers all over the world.

AMC of Fire Suppression Systems, Maintenance & Inspection

We Design , supply and installation of kitchen hood fire suppression systems in Dubai and also in other emirates of UAE. modern commercial kitchens, the risk of fire is very high. so wet chemical fire suppression system is necessary specially made for kitchen . also a single Fire accident can cause huge damage to the business itself. so kitchen hood fire suppression system is highly recommended

FIT OUT JOBS

We are undertaking all types of fit out works in Dubai also fire alarm and firefighting works parallel with our parent company. We are doing fit-out works in Dubai and throughout the UAE. we are expertly managed by a qualified and dedicated construction managers who ensure critical deadlines are always met, quality standards to our 'Client's expectations. Each fit out works performed by our company has been unique and delivered on time and within a budget. We start from pre-approval by the licensing authorities, ending with your completion certificate, ready for you or your customers to move in. For fit out works we are providing approval of fire protection service from the concerned authorities from Dubai, Abu Dhabi, Sharjah and all other emirates. We require civil defence complaints so we need to have fire protection as per the civil defence rules and regulations. We do installation of fire alarm and firefighting systems such as installation of sprinkler, emergency lighting installation, smoke detector installation, fire extinguisher installation. Our parent company blue flame firefighting is doing all kind of works. Discuss your Fit out needs with our professional project manager and get an obligation-free quote that will save your time and money and transform your space into an inspiring, productive workspace.

FIRE ALARM INSTALLATION

Blue Flame Firefighting professional fire engineers and technicians provide, design, installation, training and programming of fire alarm systems and automatic detection for a wide variety of standard systems and special hazard systems. We provide the best possible service at reasonable cost to all of our customers, right from the start to finish.

FIRE FIGHTING WORK INSTALLATION

Blue Flame Firefighting professional fire engineers and technicians provide, design, installation, training and programming of fire alarm systems and automatic detection for a wide variety of standard systems and special hazard systems. We provide the best possible service at reasonable cost to all of our customers, right from the start to finish.

EMERGENCY LIGHT & EXIT LIGHT INSTALLATION

Emergency Exit light in Dubai is required for maintaining a safer environment in the event of a fire risk or an emergency. Emergency exit lights also help to enable safe evacuation from the area, to maintain order, prevent occupants from being panic , However regular inspections and repairs on emergency exit lights which helps you ensure your emergency lighting is operating in a proper and safe manner.

PRODUCTS

FIRE ALARM SYSTEMS

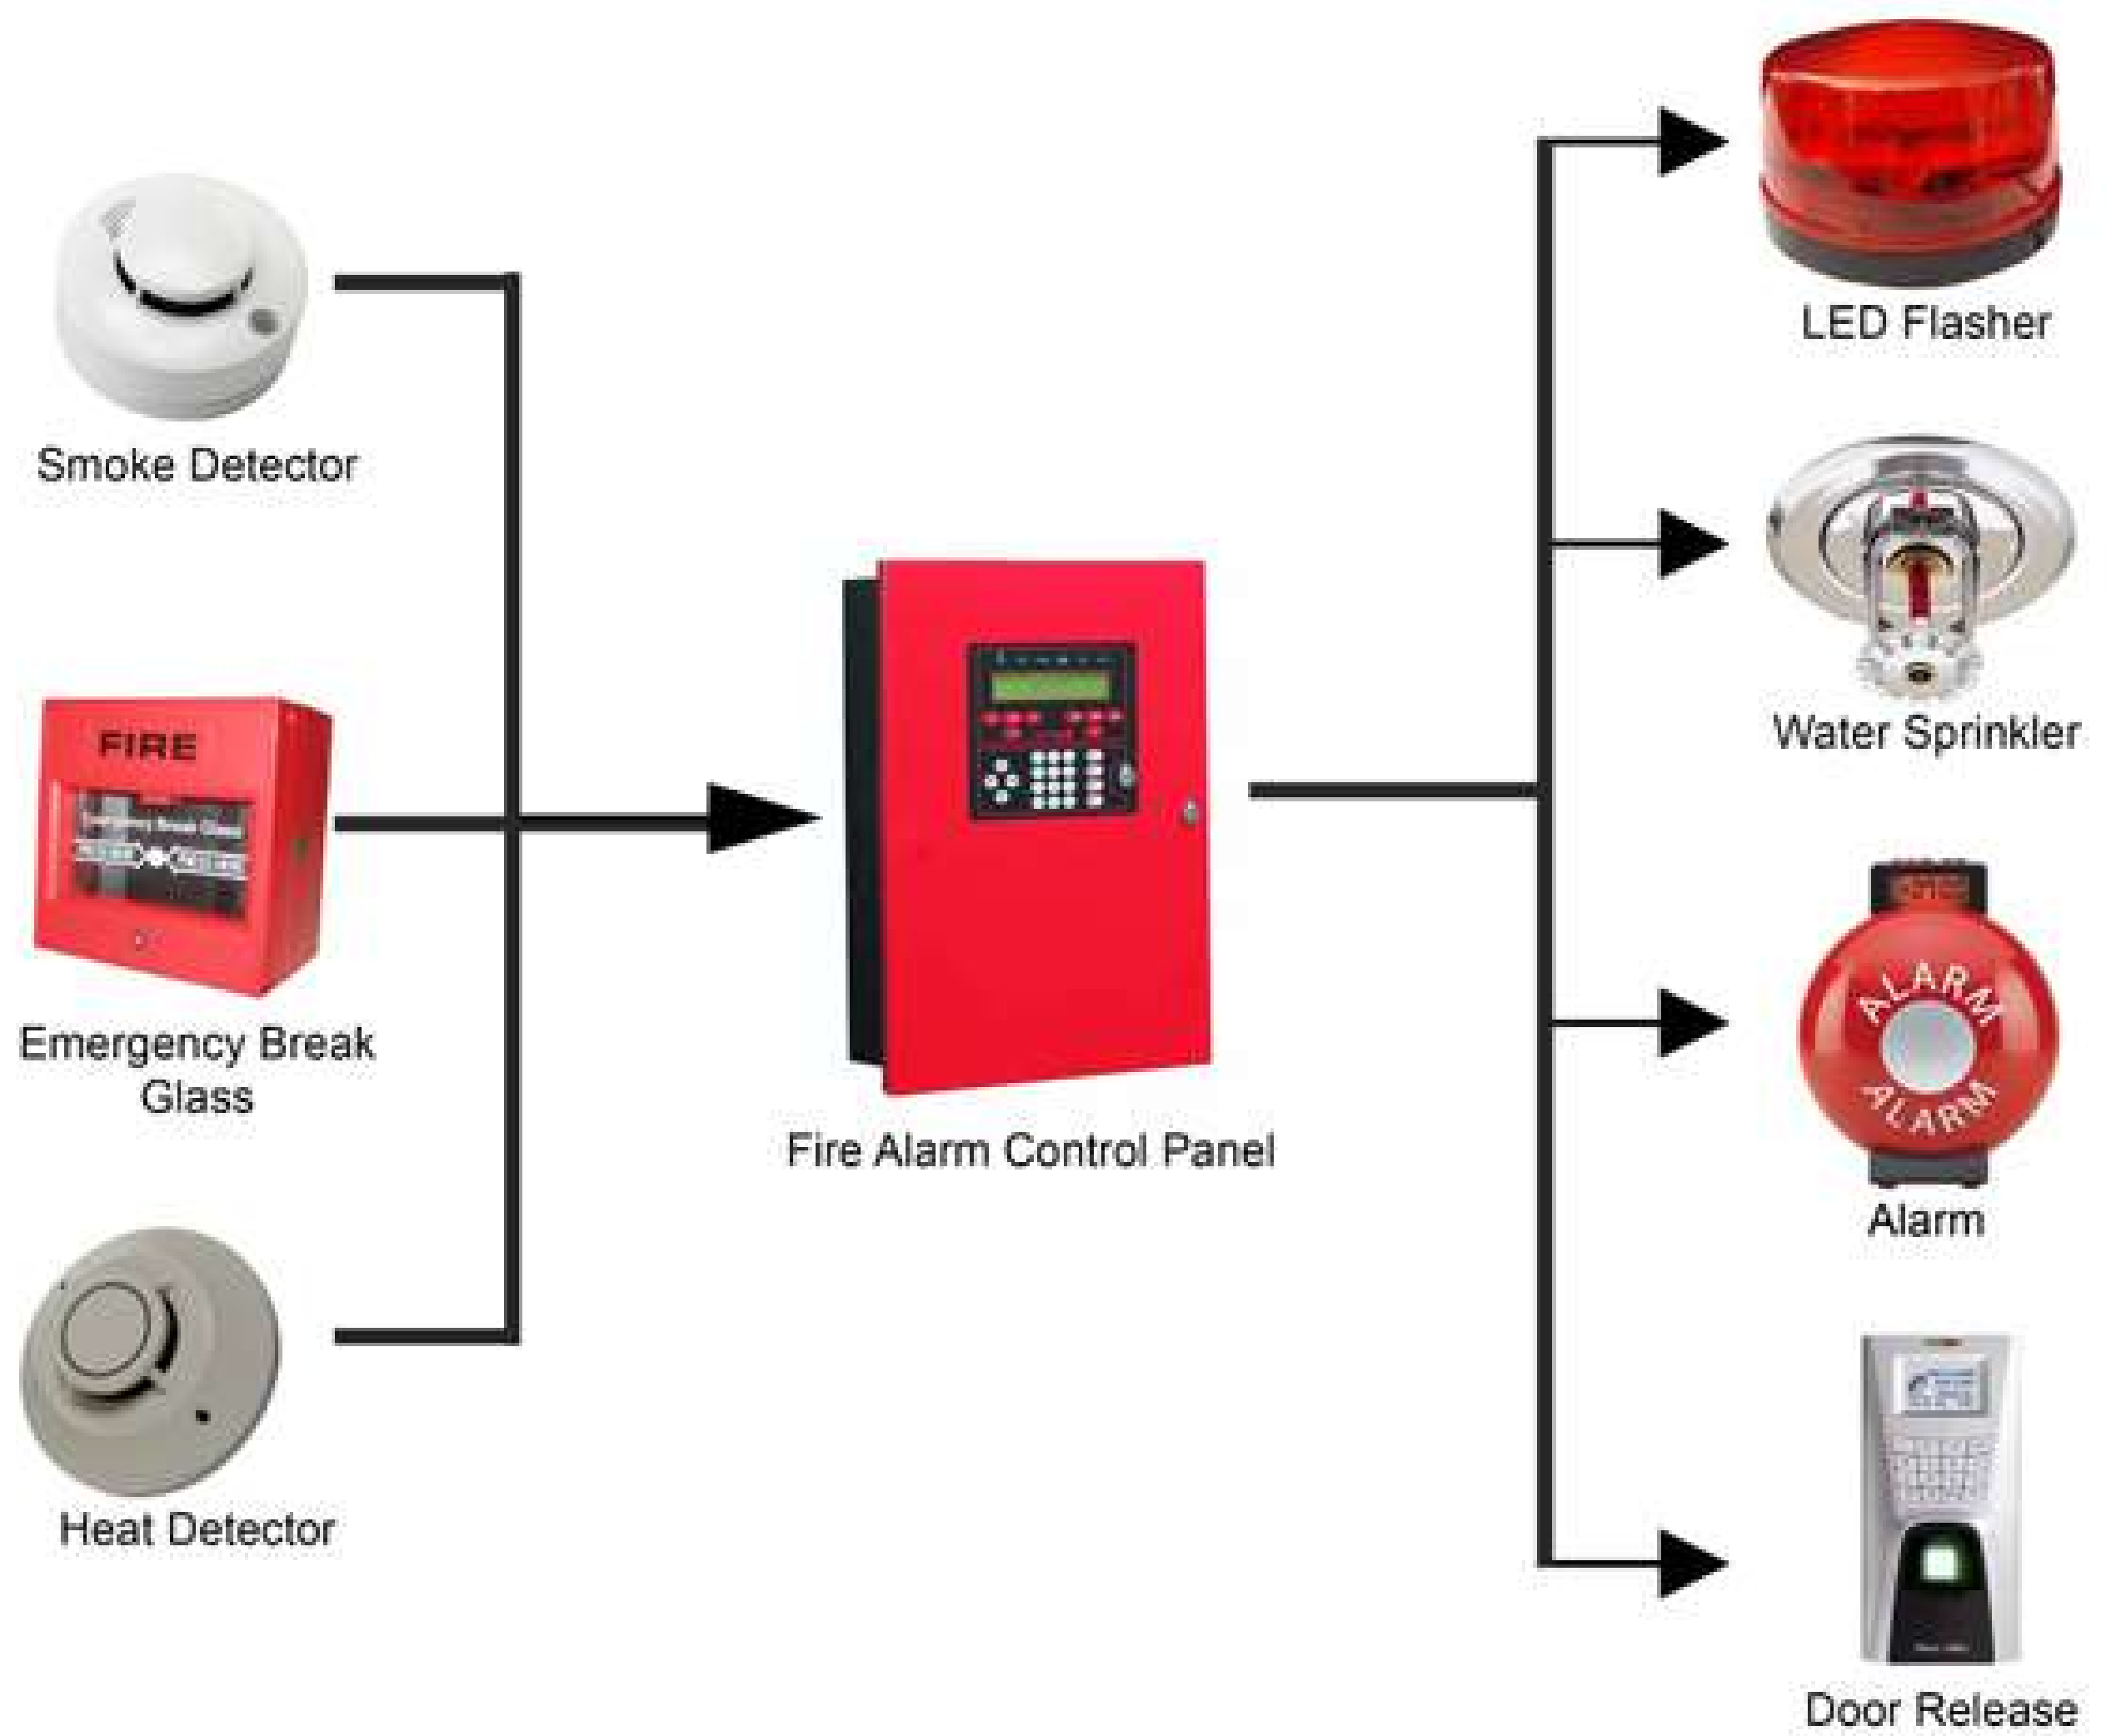

A fire alarm system warns people when smoke, fire, carbon monoxide, or other fire-related or general notification emergencies are detected. These alarms may be activated automatically from smoke detectors and heat detectors or may also be activated via manual fire alarm activation devices such as manual call points or pull stations. Alarms can be either motorized bells or wall-mountable sounders/horns.

FIRE ALARMS CONTROL PANEL

A fire alarm control panel (FACP), fire alarm control unit (FACU), fire indicator panel (FIP), or simply fire alarm panel is the controlling component of a fire alarm system. The panel receives information from devices designed to detect and report fires, monitors their operational integrity and provides for automatic control of equipment, and transmission of information necessary to prepare the facility for fire based on a predetermined sequence.

FIRE BELLS/SOUNDERS

Electronic fire bells connect to switches, called flow or pressure switches, that activate when water flows in a fire sprinkler or standpipe system. Alternatively, installers may use a device called a water motor gong that accomplishes the same task without electricity.

Eventually, bells become commonplace on the front of apparatus, used as a means of warning the public that a fire apparatus was responding to an emergency call.

EMERGENCY & EXIT LIGHT SYSTEM

Emergency exit lights light up the way towards these exits so people can navigate to the nearest exit with ease.

An emergency light is a battery-backed lighting device that switches on automatically when a building experiences a power outage.

EMERGENCY EXIT MONITOR SYSTEM

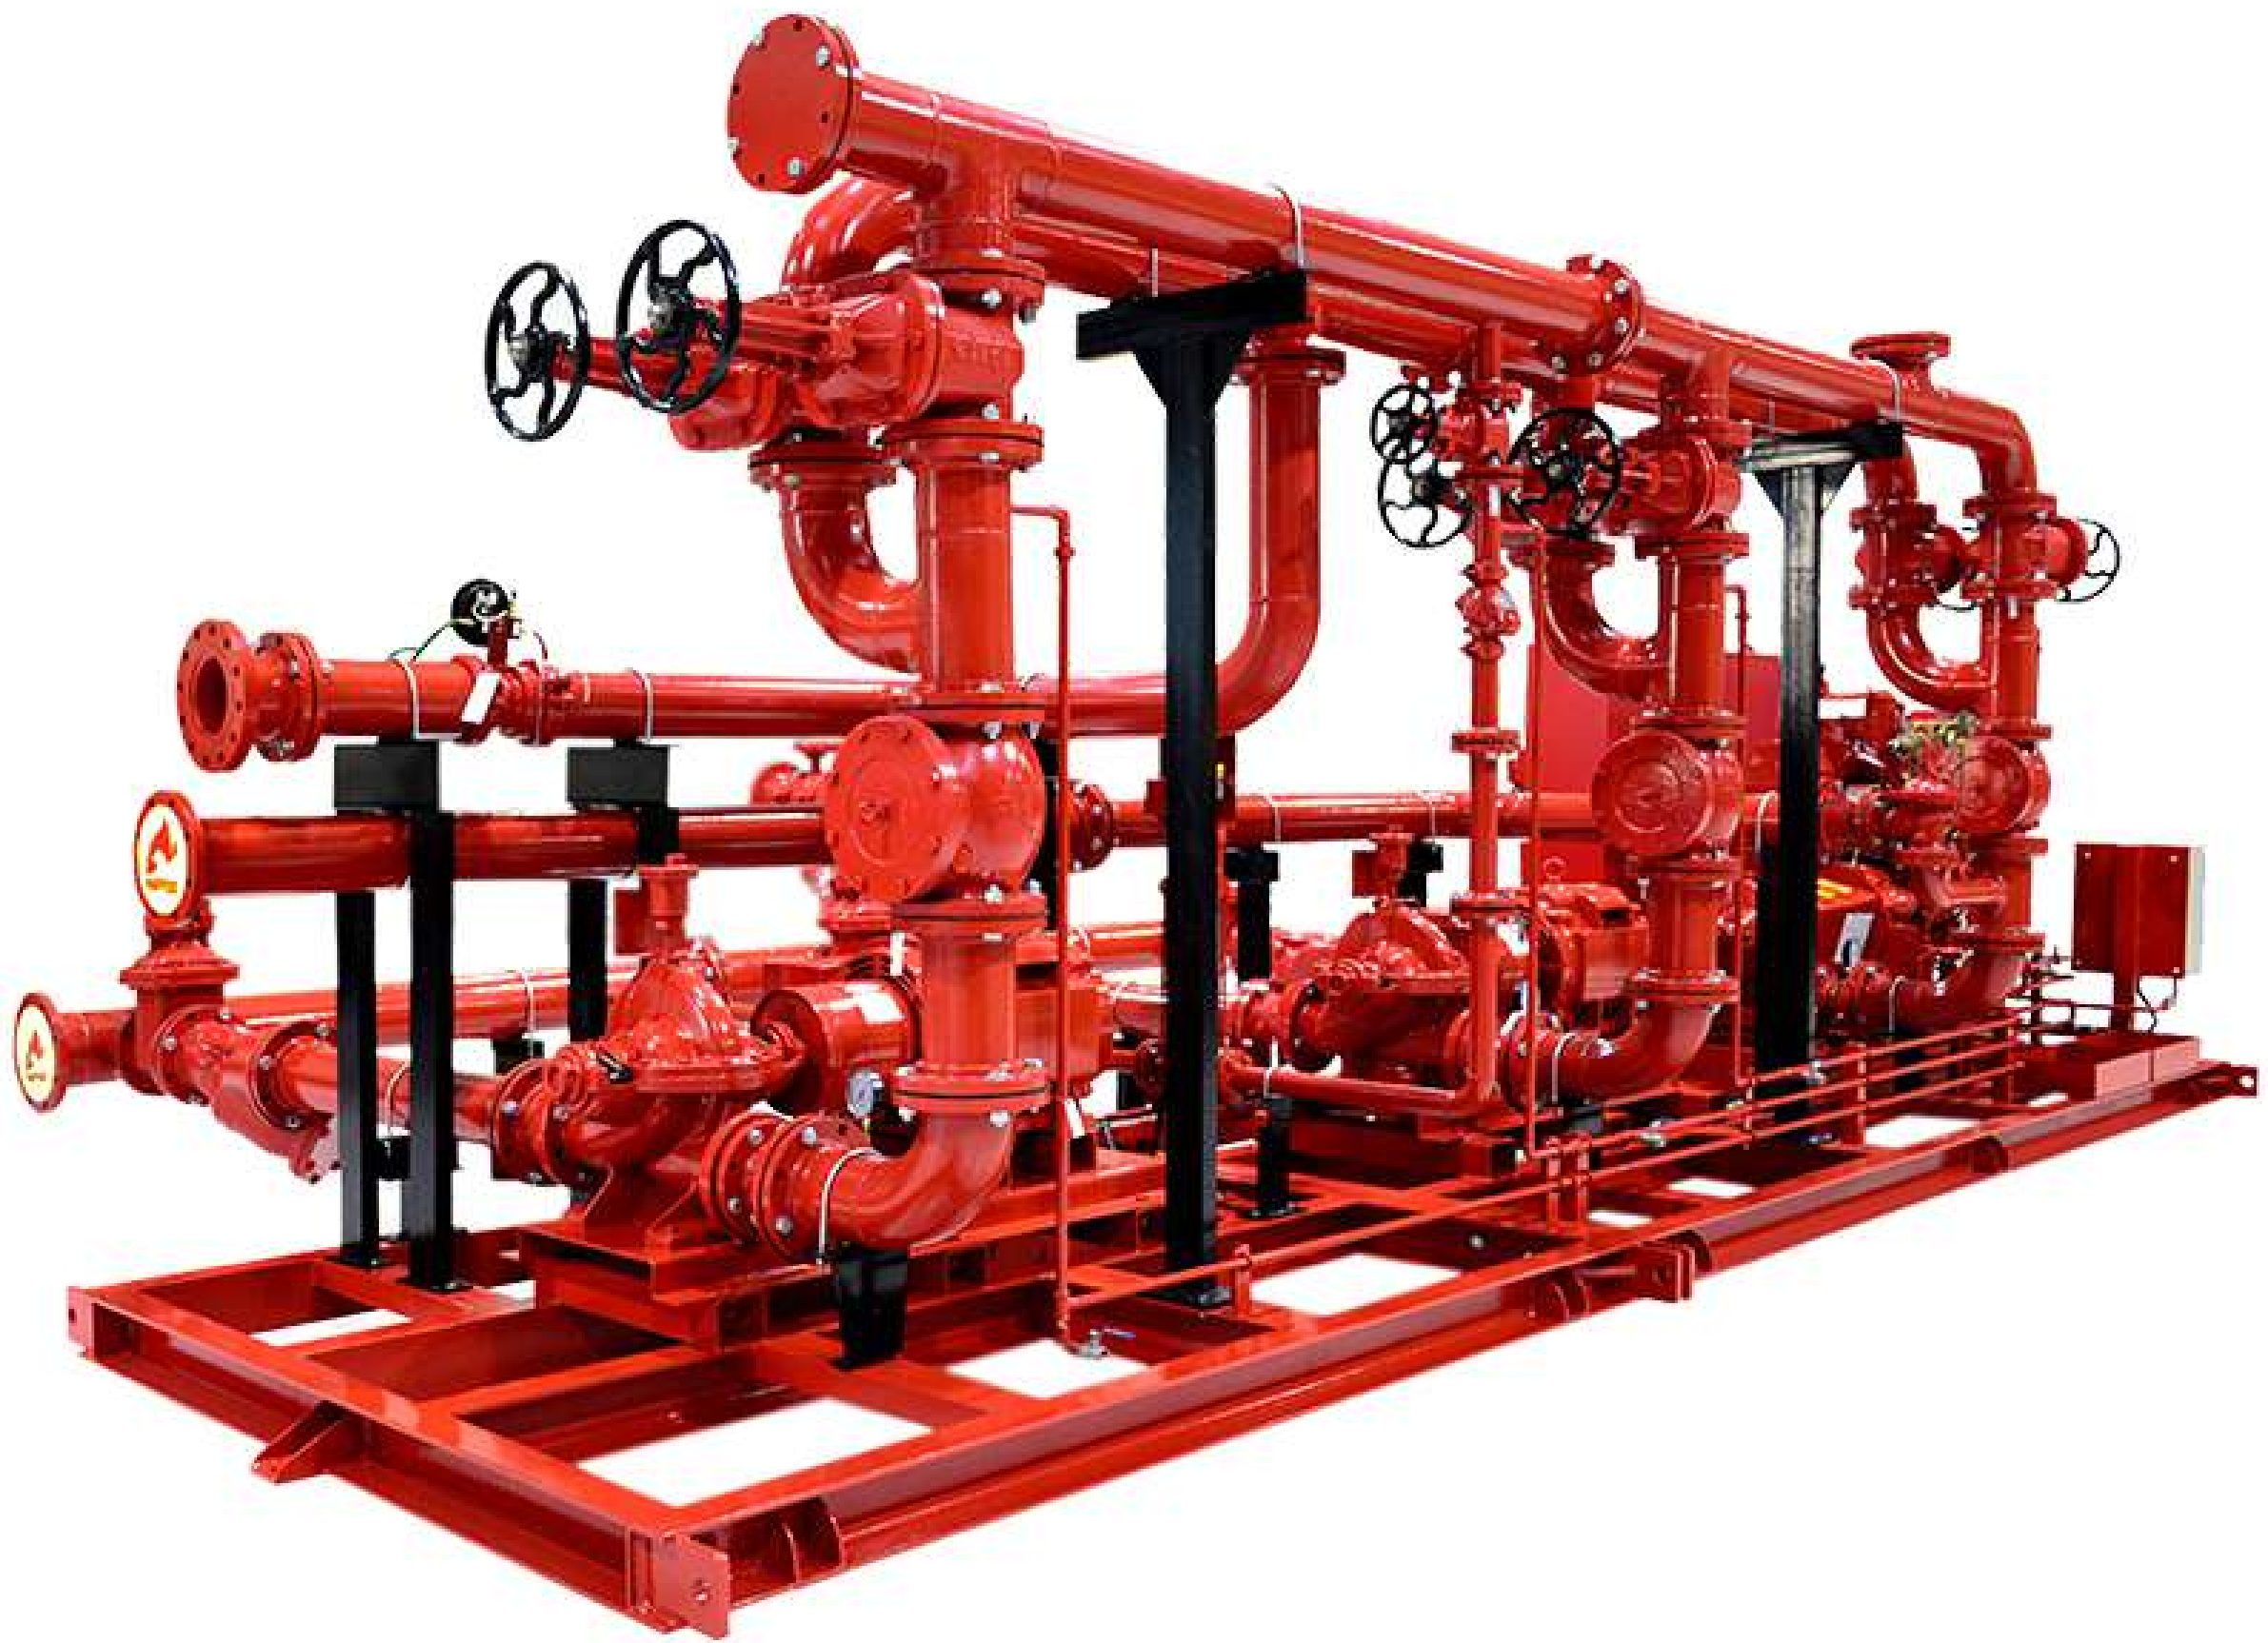

A central monitoring system monitors all individual components of an emergency lighting system, and gathers all collected information to a single location. This makes monitoring the system fast and easy, no matter how complicated the location is. The system also records data about performed tests.

A large collection of fire safety equipment is displayed on a white background. The items include several red fire extinguishers of different sizes, some with labels like 'PROTEC' and 'FIRE EXTINGUISHER'. There are also red fire hoses, a large red fire reel with a black handle, and a red fire hose reel. Various fire valves and fittings are scattered in the foreground, including brass and steel valves, elbows, and tees. Some items are labeled 'FIRE HOSE', 'FIRE EXTINGUISHER', 'FIRE REEL', 'DRY RISER INLET', and 'FIRE HOSE'. The equipment is arranged in a way that shows a variety of sizes and types, from small fittings to large reels and extinguishers.

A fire fighting system is an activity of prevention during a fire spread in High rise buildings, Commercial villas, schools, hospitals , shopping malls , warehouse etc with the use of proper fire fighting equipments like fire extinguishers, hose reels, fire monitors, nozzles, sprinkler systems, fire hydrants etc.

FIRE PUMPS

Fire pump usually refers to a pressure-increasing component of the water supply for fixed-place fire suppression systems such as fire sprinklers, standpipes, and foam systems. Fire pumps are also a critical component integrated into fire trucks and fire boats, and serve a similar purpose boosting water supplies for firefighting hose operations. Fire pumps are used to increase the pressure of water sourced from a municipal underground water supply piping network, or a static supply (e.g., tank, reservoir, lake).

FIRE SUPPRESSION SYSTEMS

We are doing installation of Fire suppression and annual maintenance contracts all over UAE.

Fire suppression systems are used to extinguish, control, or in some cases, entirely prevent fires from spreading or occurring. Fire suppression systems have an incredibly large variety of applications, and as such, there are many different types of suppression systems for different applications being used today. Of these, there are some that are still in use but are no longer legal to manufacture and produce.

FM 200 SYSTEM

FM-200 is a clean agent fire suppressant for Class A, B, and C fires. It's a colorless, non-toxic gas that leaves no residue. For these reasons, it's an ideal solution for protecting high-value assets in areas that are occupied and in locations where the cleanup of other agents is problematic.

FIRE HOSE REELS CABINET

A fire hose cabinet is fire-fighting equipment including : a hose reel with axial supply. a water supply stop tap adjacent to the hose reel. a basic length of semi-rigid hose 30m maximum in length. 12 gauge steel box, powder coated with a thermally-fused white polyester finish, 12 gauge flat steel door and frame.

FIRE EXTINGUISHERS SUPPLY & REFILLING

A fire extinguisher is a handheld active fire protection device usually filled with a dry or wet chemical used to extinguish or control small fires, often in emergencies. It is not intended for use on an out-of-control fire, such as one which has reached the ceiling, endangers the user (i.e., no escape route, smoke, explosion hazard, etc.), or otherwise requires the equipment, personnel, resources, and/or expertise of a fire brigade.

We do Supply & refilling of all kind of fire extinguishers all over UAE.

FIRE BLANKET

A fire blanket is a safety device designed to extinguish incipient (starting) fires. It consists of a sheet of a fire retardant material that is placed over a fire in order to smother it.

Small fire blankets, such as for use in kitchens and around the home are usually made of glass fiber and sometimes kevlar, and are folded into a quick-release contraption for ease of storage.

SPRINKLER SYSTEM

A fire sprinkler system is an active fire protection method, consisting of a water supply system, providing adequate pressure and flowrate to a water distribution piping system, onto which fire sprinklers are connected. Although historically only used in factories and large commercial buildings, systems for homes and small buildings are now available at a cost-effective price.[1] Fire sprinkler systems are extensively used worldwide, with over 40 million sprinkler heads fitted each year. Even though fire sprinkler systems are a life saving system and are not designed to protect the building, 96% of buildings that had fires and were completely protected by fire sprinkler systems were controlled by the fire sprinklers alone.

FIRE RATED STEEL DOORS

A fire-rated steel door is a specially designed door constructed with steel and other fire-resistant materials. It is engineered to withstand high temperatures and prevent the spread of fire for a specified duration, providing a barrier to protect people and property in case of a fire emergency.

KITCHEN HOOD SUPPRESSION

Kitchen fire suppression systems are highly effective fire containment systems. Once a fire is detected, the system's nozzles discharge wet chemicals from above the appliance. The wet chemicals cover the flames and starve the fire.

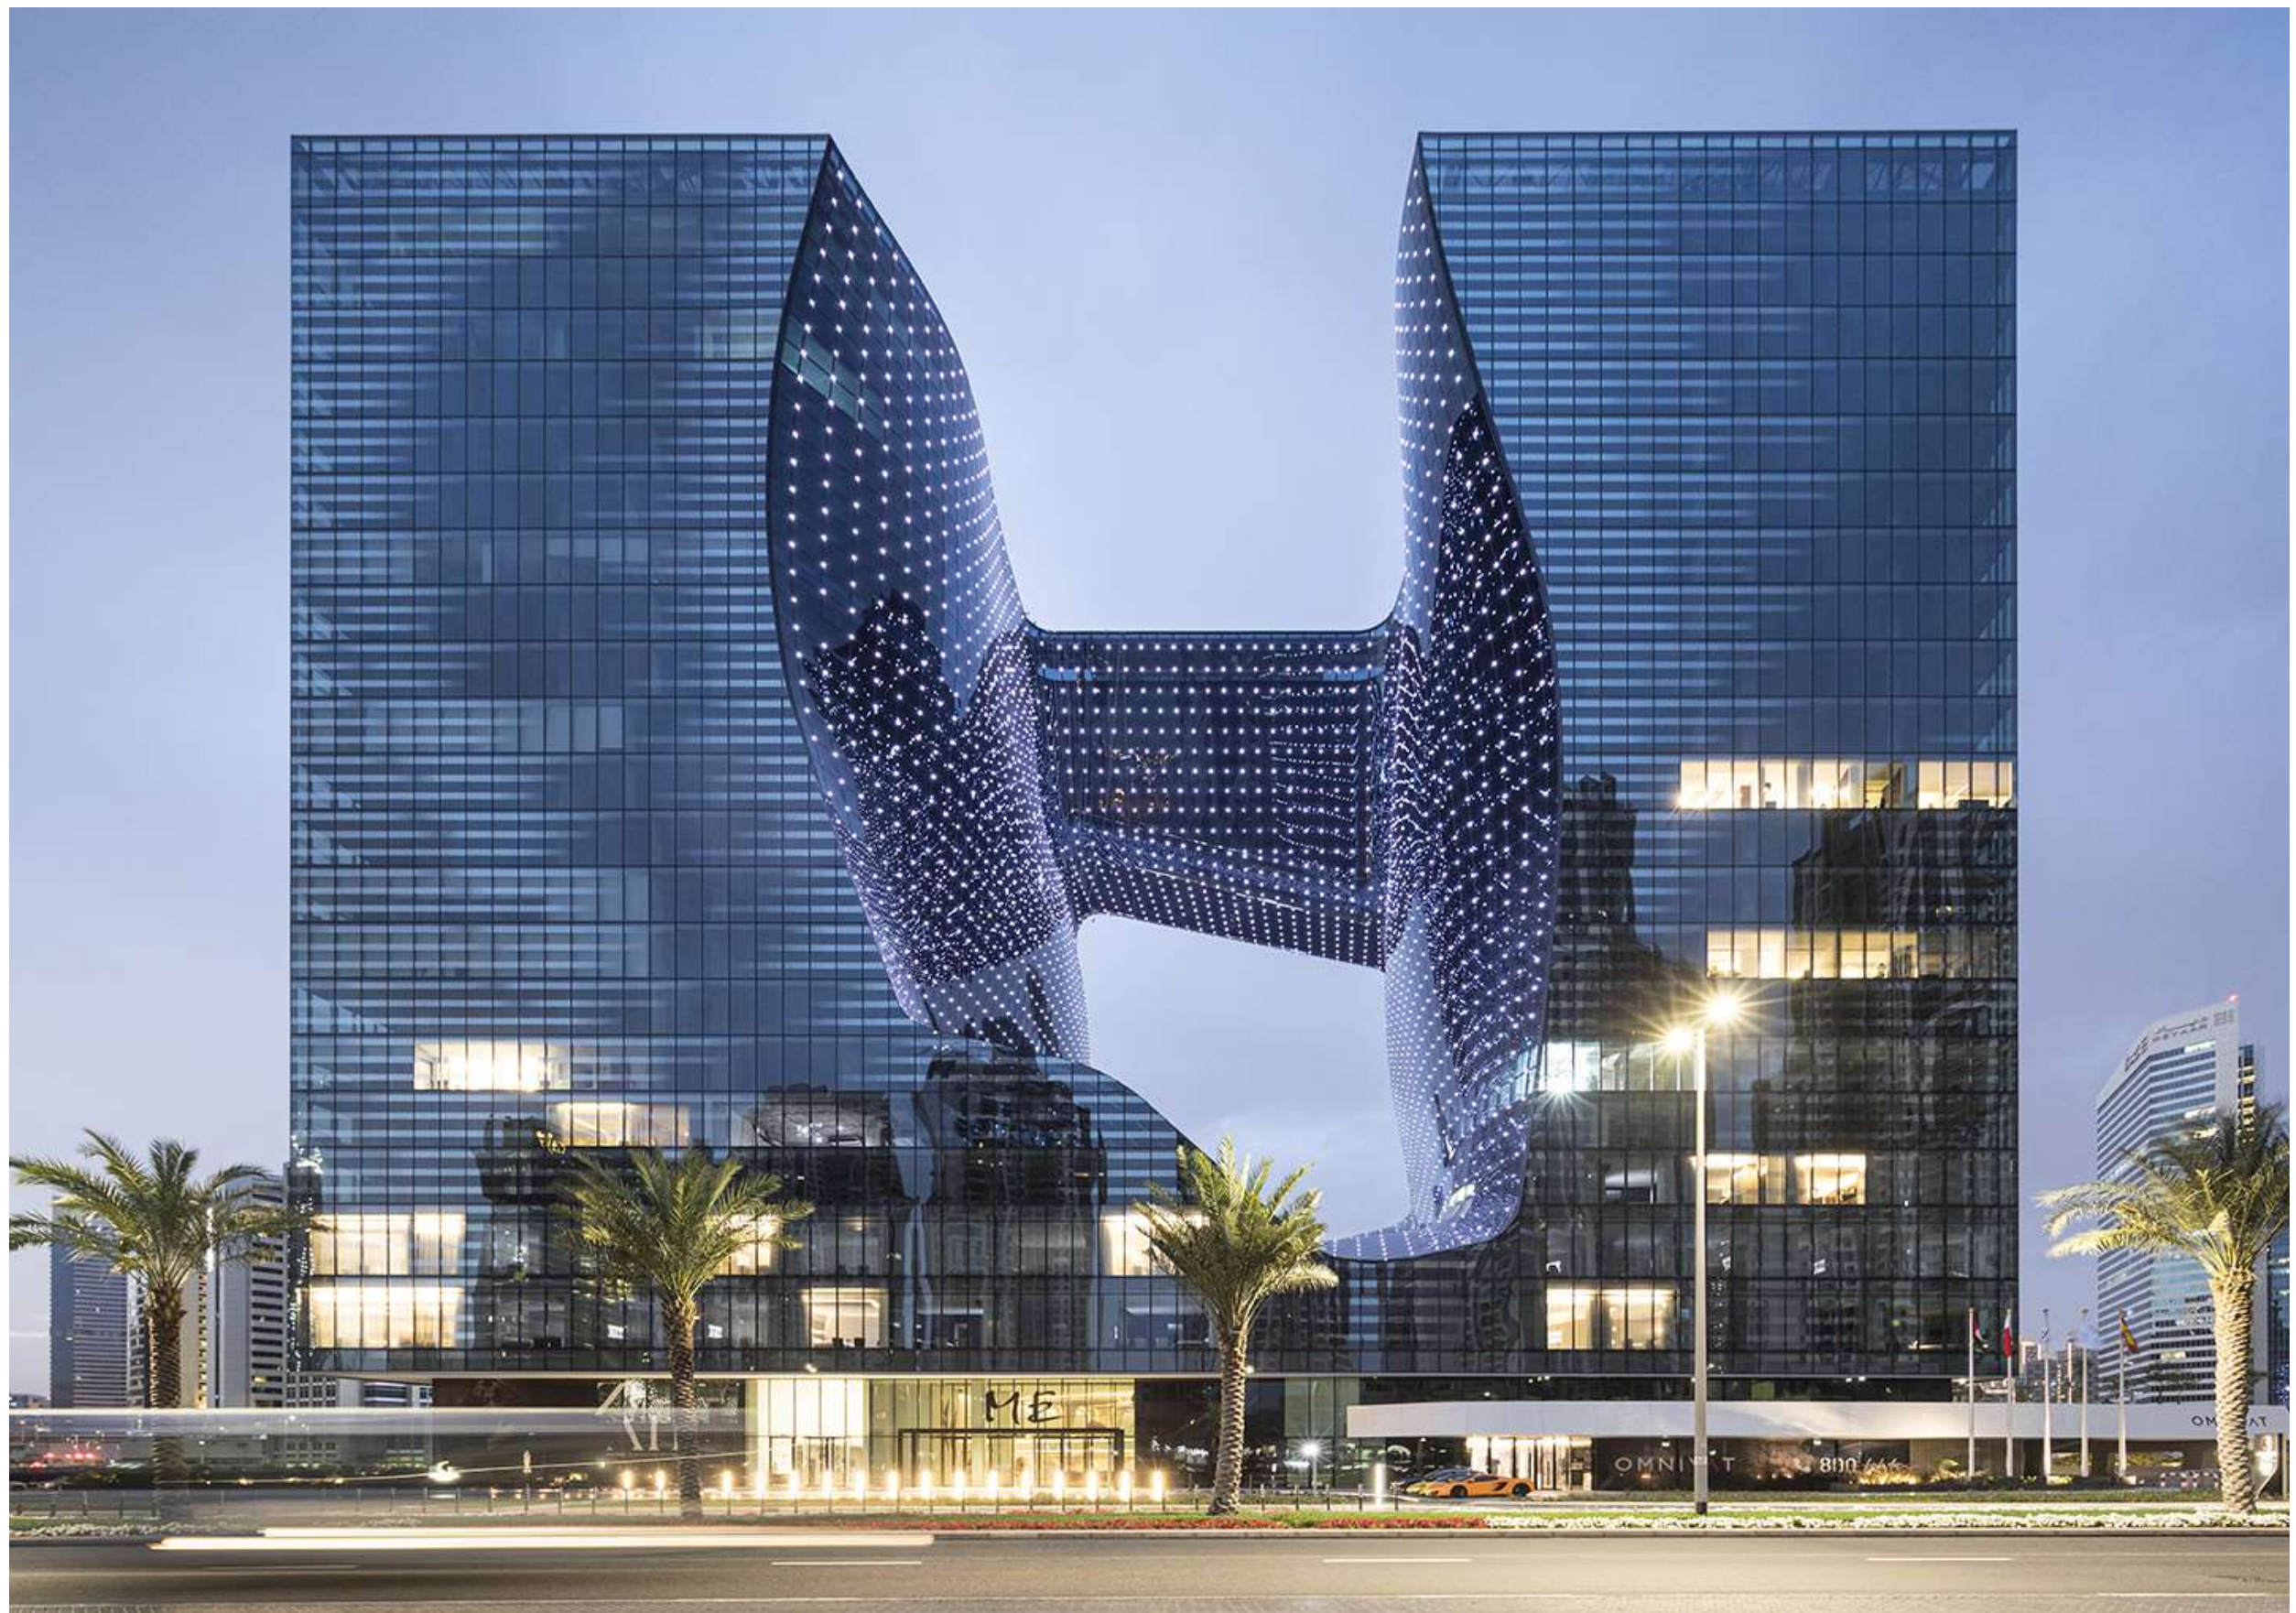

RedBlue flame taking full responsibility From A to Z , drawing preparing , taking approvals, execution of projects til final hand over.
